

ACHIEVING THE STRONGEST AESTHETIC RESTORATION

KATANA™ Zirconia HTML / HT

Combining strength with aesthetics!

HTML: UPGRADING OF ML

KATANA™ Zirconia HTML is the renewed and enhanced version of KATANA™ Zirconia ML. This fundamental renewal is accompanied by a shade extension from 6 shades to 14 shades. The previously used shades A Light, A Dark, B Light, C Light, D Light, A White will now be replaced by the classic VITAPAN shades: NW, A1, A2, A3, A3.5, A4, B1, B2, B3, C1, C2, C3, D2 and D3. Accordingly, KATANA™ HTML provides greater usability for highly aesthetic and at the same time high-strength restorations, both as a framework and for monolithic full-arch restorations. In addition, it offers a simplification and more variation in shade selection which simplifies the communication between dentist and dental technician regarding shade determination.

Diameter 98.5mm. Thickness: 14, 18 and 22 mm

HT: A KATANA™ CLASSIC IS GROWING

The high-strength KATANA™ Zirconia HT which was previously available in disc thickness of 10, 14, 18, 22 and 26 mm is now also available in 30 mm. Again, usability for the dental technician is in the spotlight. It is now much easier to produce full arch frameworks, even in case of unbalanced jaw situations. In addition, for patients with significant atrophy, it offers the possibility to fabricate restorations with more gum and/or bone parts.
